

Data Contract — Customer 360 Profile

Open Data Contract Standard (ODCS) `v3.1.0` · Generated from the live Ontos contract on 2026-08-14

This document describes the **Customer 360 Profile** data contract as registered in Ontos: its identity and versioning, the governance context it lives in, its full schema definition, the data-quality rules attached to it, and the accountable team. Field values reflect the contract's authoritative state as returned by the Ontos API (`GET /api/data-contracts/{id}`).

1. Contract Identity & Versioning

Attribute	Value
Name	Customer 360 Profile
Contract ID (Ontos UUID)	37fdde49-bd5b-4d2f-8985-ad6dc2155a04
Version	<code>1.0.0</code>
Status	active
Kind	<code>DataContract</code>
API Version (ODCS)	<code>v3.1.0</code>
Tenant	<code>BricksAndCoInc</code>
Created	2026-08-14 12:35:46 (+02:00)
Last Updated	2026-08-14 13:10:04 (+02:00)
Publication Scope	none (not yet published)

2. Governance Context

The contract is bound into the Bricks&Co Customer governance hierarchy — a domain owned by a team, delivered within a project.

Relation-ship	Name	ID
Domain	Bricks&Co Customer Core	

Relationship	Name	ID
		162711ff-c517-4975-bb4c-7aa5a8531cc4
Owning Team	Bricks&Co Customer Team	73671e16-f539-4f04-a431-7cf9b69e56d2
Project	Bricks&Co Customer 360 Project	74ec59e7-e66f-4b5b-b01f-6d3816dd348f

Governance Tags

All tags are drawn from the `bricksco` enterprise governance namespace and are `active`.

Tag (FQN)	Assigned Value
<code>bricksco/domain</code>	—
<code>bricksco/data-tier</code>	—
<code>bricksco/data-classification</code>	—
<code>bricksco/pii</code>	—
<code>bricksco/lifecycle-status</code>	—

The five governance tags are attached to the contract; assigned values are managed at the namespace's controlled-vocabulary level.

3. Purpose, Usage & Limitations

Purpose

: Authoritative, deduplicated 360-degree profile of every Bricks&Co customer: identity, contact details, consent, loyalty tier, and lifetime value.

Usage

: Customer segmentation, CLV and churn modelling, marketing activation, and service-desk lookups. Join to order and interaction products on `customer_id`.

Limitations

: Contains direct personal identifiers; restricted to consumers with an approved purpose. Refreshed daily; not intended for sub-daily operational use.

4. Schema Definition

Schema object: customer_360_profile · **Business name:** Customer 360 Profile ·

Physical type: table · **Property count:** 16

One row per customer with the golden profile record.

4.1 Properties

#	Property	Business Name	Logical Type	Physical Type	Req.	Unique	PK	Classification
1	customer_id	Customer ID	string	STRING	✓	✓	✓ (pos 1)	internal
2	first_name	First Name	string	STRING	✓			confidential
3	last_name	Last Name	string	STRING	✓			confidential
4	email	Email	string	STRING	✓			restricted
5	phone	Phone	string	STRING				restricted
6	address_line1	Address Line 1	string	STRING				confidential
7	city	City	string	STRING				internal
8	state_province	State / Province	string	STRING				internal
9	postal_code	Postal Code	string	STRING				internal
10	country	Country	string	STRING				public
11	customer_since	Customer Since	date	DATE	✓			internal

#	Property	Business Name	Logical Type	Physical Type	Req.	Unique	PK	Classification
12	loyalty_tier	Loyalty Tier	string	STRING				internal
13	lifetime_value	Lifetime Value	number	DECIMAL(12,2)				confidential
14	customer_status	Customer Status	string	STRING	✓			internal
15	marketing_consent	Marketing Consent	boolean	BOOLEAN	✓			internal
16	updated_at	Updated At	timestamp	TIMESTAMP	✓			internal

Legend — **Req.:** required · **PK:** primary key (with ordinal position).

4.2 Classification Summary

Classification	Columns
restricted	email, phone
confidential	first_name, last_name, address_line1, lifetime_value
internal	customer_id, city, state_province, postal_code, customer_since, loyalty_tier, customer_status, marketing_consent, updated_at
public	country

5. Data Quality Rules

Two library-based quality rules are registered on the contract.

Rule	Column	Type	Rule Kind	Dimension	Severity	Condition
customer_id_not_null	customer_id	library	nullValues	completeness	error	must be
email_format	email	library	invalidFormat	conformity	warning	valid format

6. Accountable Team

Username	Role	Description
unknown@dev.local	Owner	Product owner for Customer 360.
customer.steward@bricksco.com	Data Steward	Accountable for quality and consent.
customer.eng@bricksco.com	Data Engineer	—

7. Notes on Contract State

- **Status** is `active` and the contract is fully versioned at `1.0.0` under ODSCS `v3.1.0`.
- The following ODSCS blocks are **not currently populated** in the registered contract: `servers`, `slaProperties`, `price`, `support`, `roles`, and `authoritativeDefinitions`. Object-level quality assertions are surfaced through the two property-level rules in Section 5.
- Governance tags are attached but carry no per-assignment value; values are governed by the `bricksco` namespace vocabulary.
- The contract is referenced by the **Customer 360 Profile** data product's output port, which points at the physical asset `bricks_co.customer_360.customer_360_profile`.
